DECLARATION

Free of radioactive contamination

01/22/2020

Arconic-Köfém Mill Products Hungary Kft. has been controlling all the incoming freights (both trucks and wagons) since 1996 to filter out radioactive contamination. The „radioactivity measuring gates” and the alarm system at road and railway entries ensures that unchecked delivery cannot enter the plant. Arconic-Köfém Mill Products Hungary Kft. checks all the incoming materials which can influence the radioactive contamination of the aluminum end-product /e.g. control of incoming aluminum raw material (included the scrap), alloying raw materials, auxiliaries, walling of the furnaces, lubricants, etc.

Hereby we declare that Arconic-Köfém Mill Products Hungary Kft. checks all the shipment arriving either on road or by train with calibrated radio-contamination measuring equipment. Due to our customers' expectation our system 100% secures that no pre-checked material will be processed in our plant.
