ARCONIC

REACH COMPLIANCE DECLARATION

Arconic-Köfém Mill Products Hungary Kft hereby declares that the produced coils, sheets and circles from the following alloys are in compliance with the requirements of the European Union – REACH Regulation (EC 1907/2006):

Under REACH, manufacturers and importers are responsible for registering, evaluating, and managing the risks associated with chemical substances (≥ 1 tonn/year), ensuring the protection of human health and the environment, and providing relevant safety information throughout the supply chain.

- All substances used are registered, evaluated, and managed in line with legal requirements.
- None of the substances newly added on **04 February 2026** are present in our manufactured products above regulatory thresholds (> 0.1% w/w).
- We maintain up-to-date Safety Data Sheets and communicate any SVHC presence to our customers as mandated by REACH.

The **Candidate List** is part of the **REACH Regulation (EC 1907/2006)**, managed by **ECHA** (European Chemicals Agency). REACH requires companies to identify and control risks of chemicals, and the Candidate List specifically names **Substances of Very High Concern (SVHC)** that may later require authorization or restriction. ECHA updates this list regularly, and under REACH, manufacturers must communicate if these substances are present in their products above 0.1% (w/w) and comply with all related obligations.

The latest update to the Candidate List of Substances of Very High Concern (SVHC) by the ECHA (Member State Committee) occurred on **04 February 2026**, when one new substance was added:

- 1,1'-(ethane-1,2-diyl)bis[pentabromobenzene] (DBDPE)

Additionally, we comply with the **CLP Regulation (EC 1272/2008)**, which ensures proper classification, labelling, and packaging of chemicals according to the UN GHS system, guaranteeing transparent hazard communication and safe handling.

Péter Bereczki Dr.
Quality and Product Development Manager
